Good Reading

The Loxahatchee River flows from a "sunken railroad" in the mouth and exits at the 17,000-foot-long Jupiter Inlet. The river is the largest of its kind in Florida, and its estuary is one of the most biologically diverse in the state. Its history is marked by a series of flooding events, changes in river flow, and human activities, including development and agriculture. The river is home to a wide variety of wildlife, including manatees, sea turtles, and dolphins, as well as many species of fish and other aquatic life. The Loxahatchee River Historical Society collection includes a collection of books and records, as well as a museum that tells the story of the river and its communities. The society has formed partnerships with other organizations to conserve and protect the river, and it works to educate the public about the importance of the Loxahatchee River.
